

leg&go

Everything a first bike
should be!

8 bikes in 1!

Leg&go grows with your child from ages 6 months to 6 years.

The easily adjustable frame and seat ensure that the bike will always be the right size for your little one. Moreover, with quick and easy transformations, change it from a balance bike into a pedal bike, rocking elephant or even a sledge.

Teach your child to walk, balance and pedal with leg&go in 8 different and fun ways!

3in1

Ages 10 months - 5 years

All friendships begin somewhere, and this 3-in-1 bike is the foundation for a lasting friendship with leg&go. It is required for transforming the bike into any other modification of leg&go.

3in1 Balance Bike

Ages 1.5 - 5

This bike helps to develop sense of balance, coordinated movements and straight posture in a safe way.

Intelligently designed, the unique wooden frame provides excellent natural suspension, absorbs vibration, and safeguards your child's spine on any terrain, while

the perfect frame thickness guarantees durability. The bike is lightweight – only 3.3 kg.

Furthermore, this variation is particularly adaptable in size which means that this friendship will last until the age of 5!

3in1

Baby Bike

Ages 10 months - 2 years

Baby Bike is made for the little ones that have just learned how to stand: it is the perfect companion to encourage them to take their first steps and develop their sense of balance.

Health professionals agree – the sooner children start practising balancing, the better.

Featuring an upside-down frame, this is the lowest variant of them all – suitable for the youngest riders, whose leg inside height measures as little as 20 cm.

Seeing your child's face light up with the first successful attempt at balancing the bike is beyond words!

3in1 Bouncy Bike

Ages 2 - 3

With a clever frame construction, the Bouncy Bike is the perfect choice for bouncy, yet safe rides. Most suitable for chill riding on flat terrain.

The 3-in-1 variations have a bigger front wheel, giving more control, while the steering limiter prevents sharp turning angles.

All leg&go bikes are equipped with inflatable tyres, lightweight metal rims and steel spokes – just like a real bicycle!

Modification

Rocking Elephant

Ages 6 - 18 months

Elephants are known to be wise, gentle and kind, which makes this leg&go modification the perfect friend to teach your child a sense of balance as soon as the little darling has learned to sit up.

The rocking action is just as safe and smooth as the steps of a real elephant. The mindful design

ensures that your baby will never get its feet caught underneath it or fall over.

When the beloved Elephant transforms into the Balance Bike, the child will already be familiar with it.

Modification

Downhill Bike

Ages 2 - 5

For the adventurers and daredevils. The attachable footrest is designed to help the child conquer slopes and

enjoy darting down hills – stable enough for riding in standing position, too!

Modification

Pedal Bike

Ages 3 - 6

With this modification, learning how to pedal will be very fast, since your child has already learned how to balance on a bike. We have seen it every time – children develop the pedalling reflex within a few hours, sometimes even minutes.

This is one of the lightest pedalling bicycles on the market – only 4.9 kg!

Weighing as little as 25% of the child's weight (assuming it's 20 kg), handling the bike is especially easy.

The bike is equipped with a coaster brake and a durable belt instead of a steel chain. Also, the bike width and pedal inside distance are especially narrow, allowing the child to pedal without splay.

Modification

Tricycle

Ages 2 - 4

For stability lovers. The bike is equipped with belt drive to a single rear wheel, leaving the other wheel to spin freely, ensuring easy pedalling and manoeuvring, including backwards. With fixed gear, this bike is best suited for flatland cruising.

The rear cargo box has a special significance – it is perfect for taking the favourite teddy bear or other equally important items along for the ride.

Coming Soon

Modification

Polar Bike

Ages 2 - 6

With the attachable set of skis, the Polar Bike will become your child's best buddy for exciting and safe winter fun.

This modification helps the child to understand how skis behave in the snow and what must be done in order to control them by balancing the body. Perfect for future skiers and snowboarders!

Once the winter months will pass, the trusty weather and moisture-resistant bike will be fit and eager to turn into the Balance Bike for new adventures in the spring!

Multiple modifications, same qualities

Leg&go bike is a friend that is always:

Caring:

Natural suspension through an intelligently designed wooden frame safeguards your child's spine on bumpy roads. In case of a fall, the wood partially absorbs the impact, preventing or significantly reducing the severity of injury.

Fun:

The functional frame accommodates 8 different modifications. Your child will never get bored of riding!

Green-thinking:

The bike is made from wood – a renewable natural resource. Due to its customisability and adjustability, it not only saves the parents from purchasing 2 to 3 different bikes, but is also sustainable, minimising the impact of overconsumption on the environment.

Good-looking:

The lightweight and natural wooden design definitely stands out among other bikes.

Loyal:

Your child's trusty companion from the first steps to the first days of preschool.

Tough:

It conquered 40 075 km (24 901 mi) in 312 days during a test ride around the world; a special "wonder machine" was created for the experiment, imitating bumpy roads and a rider weighing 30 kg. Moreover, before assembly, every wooden part is tested for durability. The bike will happily continue the friendship with the younger siblings, serving multiple generations.

Precious:

With 30 years of experience in engineering, the designers of the leg&go bike have found the ideal balance between all the factors – bike size, weight, geometry (frame shape), width and price.

Our Story

The inventor of leg&go bike Egons Garklavs is a visionary who sees the world as being full of opportunities, and he never sits still.

His 30+ years of mechanical engineering experience and love for his grandchildren led him to create the unique leg&go frame. Every part of the bike is mindfully designed and made with care. The production process involves a great deal of hand-crafting.

Egons has received the Eurobike Winner Award 2015 in the Urban bike category and ISPO Munich Brandnew Finalist 2016/2017 honours among the best sports business start-ups for its natural wooden design and versatility.
